Open iT Software Suite Version 6.4
Official Release

June 2015
© 2015 Open iT, Inc.

Thank you for choosing the **Open iT® Software Suite** – a tool that meters, analyzes, and optimizes usage of critical IT assets. We are pleased to announce the official release of **Open iT® Version 6.4**.

Open iT Software Suite version 6.4 offers a host of new features and functionalities for **Reporting Server, Analysis Server,** and **StorageAnalyzer**. Furthermore, Open iT version 6.4 added support for one new license manager in **LicenseOptimizer**, as well as support for one new license manager in **LicenseAnalyzer**.

New Features in Reporting Server

- **True and False Denial Reports**
  - A mechanism to determine true from false denials has been added. The data type "License Logfile Events" has been extended to include two measures: "false-denial-local" and "false-denial". Also added is a new classification called "Forward Product," which refers to the name of the product where the license was finally checked out after experiencing some false denials.

- **License Application Version Report** – allows for the ability to report on both feature version and application version.

- **Token Reporting** – improved handling of token-based licenses for FlexNet manager to include both cost and count data. It now handles the IBM token format for FlexNet.

- **Classifications Field Description** – enhancement on the web interface that displays description for the classification field.

- **Improvements on Map Maintainer** – allows the definition of an explicit default for each group type when defining the map output and allows a user to appear in multiple defaults.

- **Improvements on Token View in License Monitor** – allows the switching between count of checkouts and cost of checkouts for token features. Token features also include information about the token pool to which they belong.

New Features in Analysis Server

- **Usage Right Catalog and License Compliance Reports** – allows for the ability to import License Entitlement (Usage Rights) from Microsoft, Adobe, Autodesk, and even from applications that do not use license managers, to easily manage licenses and create reports on license compliance.

- **Roles Configuration in Administration page** – allows for the ability to add, edit and delete roles in the Administration page. Roles Permissions Configuration is also added for more ease and control in Analysis Server reporting.

- **Improvements on License Monitor Portal** – additional functionality to sort License Monitor real-time view by different criteria, such as Distinct Users, Name or License Expiration. Specific dashboard folders can now also be created to make the organization of dashboards easier.

New Feature in StorageAnalyzer

- **Parallelized Collector of File Space Data –** allows the collector to scan multiple file systems at a time.

Support for New License Manager in LicenseOptimizer – StandAlone Edition

- **LM-X License Manager** – the supported server versions are version 4.4.9 and below, specifically not the xml format of the license status.

Support for New License Manager in LicenseAnalyzer

- **Peloton**
