

WHAT IS LICENSE HARVESTING?

License harvesting helps manage software usage and improve license availability by discovering unused or underutilized licenses and releasing them back to the license server.

Did you know?

187

is the average number of deployed applications by companies with 2,000+ employees

Source: Okta, 2022¹

13 APPS

30x A DAY

the average rate of app switching among U.S. workers

Source: Asana, 2021²

Look out for these users!

License Campers

A user who keeps a license for an extended period.

License Idlers

A user who checks out a license but is not actively using the application.

License Hoggers

A user who checks out multiple licenses of the same feature at the same time.

3 Important Factors To Consider Before License Harvesting

License Usage

- active vs. inactive usage
- peak usage
- usage trends

Company Environment

- prioritization of users
- allowable number and duration of license checkouts

Automation: Configurations/Alerts

- comprehensive tool to identify idle licenses
- e-mail/pop-up alerts to end-users
- suspend/terminate/resume options

Reap the benefits

Company:

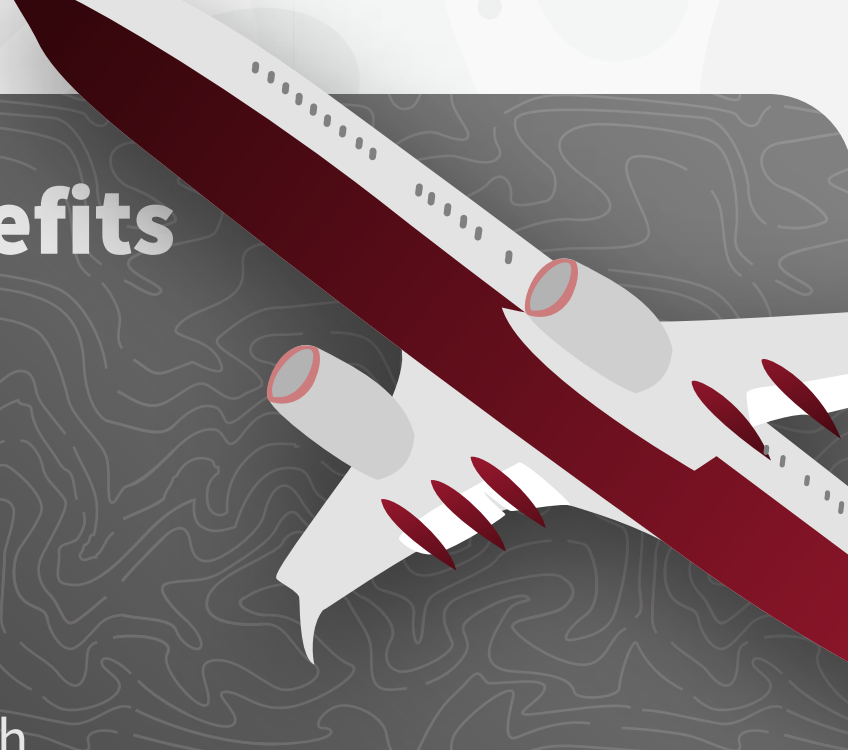

Global leader in the aerospace industry

What they did:

License harvesting with LicenseAnalyzer 2022 Level 3

What they got:

Reduced annual software costs
Improved circulation of available licenses

Harvest idle licenses without disrupting your work processes and productivity.
